

CrashGuard 6S-A

Unique ASI A Crash Cushions for 110 km/h!

Unique ASI A Crash Cushions now exclusively available at Saferoad!

We are proud to share the news of our latest innovative development: the only Crash Cushion in the EU that is ASI-A-certified on all available models in the speed classes from 80 km/h up to the highest performance level of 110 km/h. We are excited to pronounce that this exceptional product line is now exclusively available at Saferoad!

What makes our new Crash Cushion family so special?

ASI A in the highest speed class

Saferoad introduces the only Crash Cushion family in the EU that is Asi-A-certified in the highest speed class while still keeping D1 and Z1 values! Our brand-new family of Crash-Guards goes beyond just one model; it concerns a complete range, including Parallel, V-shape, and now A-symmetric models. The entire product family undergoes rigorous testing according to EN 1317-3 and meets the highest standards of EN 1317-5, with an impressive performance capacity of up to 110 km/h.

New A-Symmetric model

We are thrilled to introduce our new A-symmetric model. This clever designed product combines parallel and V-shaped versions, allowing us to offer even more flexible solutions to our customers.

Interchangeable parts, fast delivery and repair

The bodies of the P1100, V1850, and V2700 are identical, always parallel and modular with a standardized width of 110 cm. For the Parallel 800, we maintain a width of 80 cm. This uniformity not only ensures fast deliveries and speeds up the repair process but also provides a significant advantage in terms of stock. By intelligently making use of different buckling plates, we offer various shape variations.

Transport and placement benefits

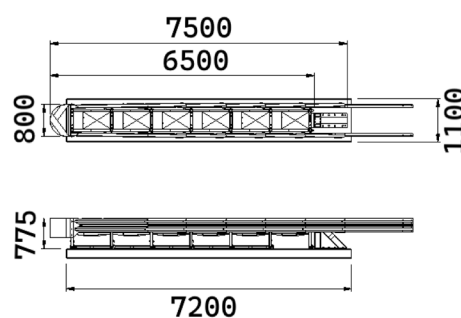

One of the significant advantages of our new Crash Cushion family is that all models are based on the same rectangular foundation. Both concrete and steel foundations now have the same shape, providing considerable transport, placement and stock benefits, while also offering more flexibility and faster delivery.
